

The American Radio Relay league has submitted comments on Docket ET 03-104. Although I am not an amateur radio operator, I agree with their well-written comments. I believe that proponents of Broadband over Power Line (BPL) have not demonstrated that it would be a wise or robust method of providing Internet access to American households. What small amount of scientific data was given to support this docket has not proven to be credible. If ET 03-104 were approved, it would violate existing FCC rules on non-interference. Wide ranges of frequencies would be interfered by or cause interference to BPL. This would be contrary to public interest.

Sincerely,
Lance E Sloan
